DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-35, drawn to methods of generating and detecting recombinant DNA sequences in *Saccharomyces cerevisiae*.

Group II, claim(s) 36-37, drawn to the plasmid pMXY9.

Group III, claim(s) 38-39, drawn to the plasmid pMXY12.

Group IV, claim(s) 40, drawn to the *Saccharomyces cerevisiae* strain MXY47.

Group V, claim(s) 41, drawn to *Escherichia coli* strain JMI 01 containing plasmid pMXY9.

Group VI, claim(s) 42, drawn to *Escherichia coli* strain DH5 containing plasmid pMXY12..

Group VII, claim(s) 43, drawn to kits containing *Saccharomyces cerevisiae* strain MXY47, *Escherichia coli* strain JMI 01 containing plasmid pMXY9 and *Escherichia coli* strain DH5 containing plasmid pMXY12.

Group VIII, claim(s) 44, drawn to kits containing *Saccharomyces cerevisiae* strain MXY47, plasmid pMXY9 and plasmid pMXY12.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Pursuant to 37 C.F.R. 1.475(d), the ISA/US considers that where multiple products and processes are claimed, the main invention shall consist of the first invention of the category first mentioned in the claims and the first recited invention of each of the other categories related thereto. Accordingly, the main invention (Group I) comprises the first recited **method**, methods of generating and detecting recombinant DNA sequences in *Saccharomyces cerevisiae*. Further pursuant to 37 C.F.R. 1.475(d), the ISA/US considers that any feature which the subsequently recited products and methods share with the main invention does not constitute a special

technical feature within the meaning of PCT rule 13.2 and that each of such products and methods accordingly defines a separate invention.

Moreover, the transformation-based recombinant cloning in *Saccharomyces cerevisiae* (which is the unifying feature of the instant claims) is known in the art (See Resnick et al. -- U.S. Patent 6,391,642) and hence does not make a contribution to said art.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
